REAL-TIME SOLUTIONS

AUGUST 2008

Current Versions: NDS 8.1 and Xephr 2.2.67

Coming Soon! SKU Stocking!

We're adding a feature that allows item quantities to be tracked using different units of measure or SKUs for items depending on the location and plant. Once alternate units of measure have been set up for the items in the item master, these alternate units of measure can be assigned as the preferred unit of measure or SKU for that item in the plant or the item location. If a preferred SKU is assigned to the item for a plant or an item location, then all plant or location quantities for that item will be displayed in that unit of measure when possible.

Stock location preferred SKUs override plant preferred SKUs. If items exist in the stock location that do not have the assigned alternate unit of measure set up in program ICM, Inventory Master Maintenance, those quantities will be shown in the item's stock unit of measure.

Once the set up is complete, each location keeps track of the item's quantity in the SKU unit of measure and its equivalent stock unit of measure. If an item is stored in a location in multiple SKUs, then a separate record is kept for each SKU with the quantities stored in that SKU unit of measure and its equivalent stock unit of measure. When quantities are being added or subtracted for items or locations with a preferred SKU, the calculation uses the preferred SKU first, unless the quantity is less than or equal to the existing stock unit of measure quantity in the location, in which case the stock unit of measure will be used. When shipping an item, the shipment can be restricted to only ship items in terms of the SKU that was ordered, while inventory counts are entered in terms of the actual physical SKU so that conversion no longer needs to take place as a part of the counting.

This new feature will be available in inventory management, sales order entry and shipping, pull card moves, physical inventory and cycle counting, inventory pull card, inventory bulk moves, and inventory adjustments.

For more information about this feature, see the NDS Online Help at <http://www.ndsapps.com/webhelp/>

Announcing a New Partnership!

NDS is pleased to announce a partnership to deliver integrated applications in order to help improve business operations and maximize value for customers. SutiSoft and NDS are working to ensure that its business solutions fully integrate to provide maximum functionality and value to the customer. SutiSoft's Business Solutions help improve business operations by delivering enhanced operational efficiencies, thereby mitigating business risk.

SutiSoft is a Business and Security solution provider focused on providing Simple, Seamless, Secured and Scalable solutions to customers in a variety of areas that contribute to business efficiency, systems security and automated operations. These products include SutiExpense, an expense management application designed to provide a simple way to create, submit and manager your expense reports. In addition, SutiSoft's SutiSign application is a centralized approval engine that can be used by any solution for electronic signature approvals. The tool eliminates time delays, paper, resource costs, shipping charges and any other costs associated with the manual approval process while improving productivity and compliance by using the SutiSign solution.

For more information on SutiSoft's Products, please contact: Scott Zielinski (650) 969-7884 x411 Email: scott.zielinski@sutisoft.com or visit their website at: <http://www.sutisoft.com>
